QUESTION 1

The box-and-whisker diagram below illustrates the distribution of the Mathematics June examination marks, out of 150, for a class of 32 grade 12 learners. The median of the marks is 65 and the mean is 71,75.

- 1.1 If none of the learners had a mark of 90 out of 150, how many learners had marks of higher than 90? (1)
- 1.2 Describe the skewness of the data. (1)
- 1.3 Calculate the range of the data. (2)
- 1.4 There is only one candidate who had a mark of 125 out of 150. On checking the answer book of this candidate, it was discovered that a mistake was made when adding his marks. The mistake was corrected, and his total mark then changed to 142 out of 150.
